| Males | .. | .. | .. | 38,660 | 39,610 | 2.5 |
| Females | .. | .. | .. | 31,620 | 32,613 | 3.1 |

1. The average employment income of workers is obtained by dividing the sum of wages and salaries before deductions, gratuities, wage loss replacement benefits, and the net income of unincorporated businesses by the number of workers. The term "workers" refers to individuals with employment and business income as their main source of income. For further information on the methodology, consult [Étude de faisabilité sur l'utilisation de statistiques fiscales pour suivre l'évolution du marché du travail par MRC](#). For information on data analysis, consult the newsletter called [Bulletin flash sur l'évolution du marché du travail dans les MRC](#).
