

Rate of workers¹ aged 25-64 years, by sex, equivalent territories of the Nord-du-Québec region, 2002-2005

	2002	2003	2004 ^r	2005 ^e	Gap 2005/2002
	%				Percentage points
Jamésie	71.0	68.3	70.5	67.7	-3.3
Males	76.4	72.7	74.8	70.3	-6.1
Females	65.2	63.3	65.6	64.9	-0.3
Kativik	72.6	74.5	76.6	75.6	3.0
Males	73.8	77.5	77.6	77.6	3.8
Females	71.3	71.4	75.7	73.5	2.2

1. The rate of workers is an indicator developed by the ISQ, using taxation statistics on individuals, to track the annual evolution of the labour market by RCM. The rate of workers is the relationship between the number of individuals aged 25-64 whose main source of income is employment or business income and the population aged 25-64 in a given territory. For additional information on the methodology, consult the feasibility study, [Étude de faisabilité sur l'utilisation de statistiques fiscales pour suivre l'évolution du marché du travail par MRC](#). For information on data analysis, consult the newsletter called [Bulletin flash sur l'évolution du marché du travail dans les MRC](#).
